# Action Tac Application Fluid

## Description

Bubbles, poor adhesion and slow, difficult application â?? especially in colder weather â?? are frustrations that Landor Action Tac wet-apply application fluids are designed to solve.
As well as standard Action Tac for general surfaces, we offer Window Juice, specially formulated to make application to glass even easier. **Jobs that can otherwise take hours can be done faster, with fewer difficulties and less skill.**

First, you have more control over application to the surface. What would usually take hours can now be done in minutes, and in most cases you donâ??t need anyone to help you. Action Tac also acts as a cleaner, cleaning the substrate and most surfaces without leaving any residue, so the installation area is free of contamination, dirt and dust â?? the first key to a good wet-apply installation. The fluid helps to â??floatâ?• the vinyl until it is accurately and firmly positioned without sliding: it has just enough viscosity to prevent slipping while still allowing you to place the film accurately. One of Action Tacâ??s key attributes is that it deals well with the surface tension of the adhesive film before placement, allowing it to flow and then bond to the surface more effectively and efficiently than a dry-apply method â?? within no more than a couple of minutes.
