Colourjet inkjet Fixative sprays Protect and enhance your inkjet prints. Frequent issue with inkjet prints are they are sensitive to the effects of water and without adequate protection are prone to premature damage and degradations

Colourjet sprays from Landor enable you to address this issue quickly and without mess! No special brushes, techniques and mess to clean up. Spryaing is also quite easy and is the quick solution for a small print or project.

Produced from high performance resins you can immediatey transform your prints from water sensitive to both water proof but also fade resistant, scratch resistant as well as chemical resistant.

Generally speaking you can expect to enjoyr your prints for double the life when coat or treat your prints with our Colourjet coatings.

For Larger projects do contact us for other options such as our **colourshield water based coatings** that usually require non porous materials (not paper) and water resistiant substrates and inks (ie:

canvas, films, banners)

Please note: Colourjet coatings are solvent based.

They need to be solvent based to be effective and to work with paper and other dye based, (water and fade sensitive inks) as well.

If you have films, canvas and other water resistant prints and substrates it is possible to use our more eco friendly and healthier range of water based Colourshield and Clearshield coatings.

Please remember you need good air circulation and potentially a protective mask when using our sprays, particularly if you are spraying a large number of prints.

Larger projects, using water resistant inks and substrates can be coated using high density our Colourshield and Marabu Clearjet water based coatings.

Colourjet is also available on special requests in tins. But you need to be mindful of the very aggressive nature of the solvents when coating with rollers.

Due to the powerful solvent content within the Colourjet tins you will need to use these in a very well ventilated area.
